form.jsp		♠♥ Add a description to this table.
form.jsp		# O Add a description to this table.

Mensajes de la clase AdminDashboardService:

- Tenemos varias variables que nos recomienda convertir a un tipo Enum. Son todos mapas que nos creamos vacíos con un HashMap, las variables son mPatronage, mAvgPatronage, mDesviationPatronage, mMaxPatronage y mMinPatronage.
- Los mensajes respecto al switch nos indican que deberíamos declarar un caso default, en nuestro caso no es necesario dado que tenemos únicamente 3 tipos de Currencies y no va a ser ninguna distinta o va a faltar alguna de ellas declaradas.

Mensajes de la clase AdminDashboardRepository:

- La variable artifact_type no cumple la metodología de nombrado de Java.

Mensajes de la clase AdministratorAnnoucenmentCreateService:

- En el método instantiate la variable result es creada justo antes de devolverse en vez de hacer un return directamente.

Mensaje de la clase InventorArtifactRepository:

- El parámetro de entrada "arifact_type" no sigue la normativa de Java.

Mensaje de las clases de la entidad Patronage:

- Todos hacen referencia a un paquete exportado no usado.

Mensajes de las clases asociadas al rol "any":

- Al nombre todas las clases del rol "any" empezando con minúscula no seguimos el formato de nombrado de Java.

Mensajes de las clases asociadas al rol "authenticated":

- Al nombrar todas las clases del rol "authenticated" empezando con minúscula no seguimos el formato de nombrado de Java.

Mensaje clase form.jsp de la vista de administrator dashboard:

- SonarLint muestra que deberíamos añadir una descripción a cada una de la tabla que nos aparece, no lo hemos visto necesario en nuestro caso.
